

# Aneesh Maganti

(312) 841-0636 • New York • aneesh.maganti@nyu.edu • github.com/aminoa • linkedin.com/in/aneesh-maganti

## EDUCATION

**New York University**, Tandon School of Engineering, Brooklyn, NY May 2024  
Bachelor of Science, Major in Computer Science GPA: **3.70**  
*Relevant Courses:* Algorithmic Machine Learning, Databases, Linear Algebra, Algorithms, Operating Systems

## SKILLS

<b>Languages</b>	C++, Javascript, Python, Bash, C#, Java, Go
<b>Frameworks/Libraries/OS</b>	SDL, Qt, React, Node.js, PostgreSQL, DynamoDB, Docker, Windows, Linux

## EXPERIENCE

**MarketFusion**, Los Altos, CA, *Software Engineering Intern* July 2022 - Present

- Rewrote 2 React.js registration pages and user-creation process, sending server requests via the Axios library to the internal MySQL database, facilitating the creation of multiple user accounts
- Revamped the login authentication system by implementing 4 unique character password checks and a length requirement of 8-20 characters client-side via regular expressions to aid the security of the website

**Corelink High-Speed Research Network**, Brooklyn, NY, *Academic Researcher* Sep 2021 - June 2022

- Implemented a C++ UDP network packet splitter to enable researchers to bypass Corelink's MTU limit from 20,000 to 64,000 bytes, increasing maximum throughput by 220%
- Managed 3 students within my team, assisting them with project design and implementation
- Researched Corelink's network architecture and RDMA (Remote Direct Memory Access)/InfiniBand protocol and wrote bash memory tests to determine the protocol's effectiveness for NYU researchers

**Monarc**, Dallas, TX, *Software Engineering Intern* Aug 2021 - Jan 2022

- Applied MVVM (Model-View View-Model) principles to develop a C# UWP (Universal Windows Platform) page, letting users manipulate a robotic football quarterback to throw balls at 5 placements and distances up to 100 yards
- Devised error checks and boot logging to enable remote debugging, improving the stability of the machine

## PROJECTS

**Chip8 Interpreter/Emulator** August 2022

- Designed C++ interpreter for Chip8 platform by emulating all 35 standard opcodes and its specifications (registers, memory, timers) after disassembling program binary data, allowing Chip8 programs to run on an x86 platform
- Employed SDL graphics library to write graphics renderer using SDL textures and handle user input

**Alzheimer MRI Detection** May 2022

- Developed classification machine learning algorithm to sort preprocessed set of Alzheimer MRI images
- Tested using Python Sklearn library with three models - a logistic regression, support vector machine and convolutional neural network - with varying levels of regularization to determine which had the greatest accuracy

**bkRoad - Amazon Lightsail Containers Hackathon** March 2022

- Won 2nd place in the hackathon
- Wrote Next.js application that allowed users to search, learn details, and loan books using 5 React.js pages
- Handled connections to a SQL Amazon DynamoDB and hosted on an Amazon Lightsail platform

**Interview Automation - HackNYU** February 2022

- Wrote Next.js React pages for creating questions and admins and applicants info pages, assisting with interviewing candidates for NYU Research Teams by providing scheduling, quizzing and management services
- Handled authentication with NYU SSO (Single Sign-On) login via Auth0 platform
